Blatt 4

A 4. 1

Fragen mit Antwort möjlichkeikn:

ja / nein/ boine Antwork

X; = Punkle in i-ter Frage

Pr[Xi = 1] = \frac{2}{5} \chi \chi; \sim \text{Ber}(\frac{2}{5})
Pr[\chi i = 3] = \frac{3}{5} \chi \chi; \sim \text{Ber}(\frac{2}{5})

 $A_1 = \chi_1 + \chi_2 + \chi_3 \sim Bin(3, \frac{2}{5})$

- E[A1] = 3 · =; Var[A] = 3 · = 3

Pr[X:=1]=== Pr[X: = -1] = 3

X: "Past" Benoulliverkilt.

~ Transformation in B-1-ZV:

 $Y_{i} := \frac{2}{3} (X_{i} + \frac{1}{2})$

 $b2w. X = \frac{3}{2} X - \frac{1}{2}$

Also:
$$A_2 = \frac{2}{2\pi} \times i = \frac{3}{2} \left(\frac{3}{2\pi} \times i \right) - \frac{3}{2}$$

wit $\frac{3}{2\pi} Y$; $\sim \text{Bin} \left(3, \frac{2}{5} \right)$

v) $\text{If } A_2 J = \frac{3}{2\pi} \text{If } \left[\sum_{i=1}^{3} Y_i \right] - \frac{3}{2}$

Livearilist

$$= \frac{3}{2} \left(3 \cdot \frac{2}{5} \right) - \frac{3}{2}$$

Vor $A_2 J = \frac{9}{4} \cdot 4 \cdot 4 \cdot 1 \cdot 1 \cdot 1 \cdot 1$

$$= \frac{9}{4} \cdot 3 \cdot \frac{2}{5} \cdot \frac{3}{5}$$

Beachte:

$$0 < \frac{N}{2} = A_3 = R - F - \frac{1}{2}K$$
 $-K = 3 - R - F$
 $= \frac{3}{2}R - \frac{1}{2}F - \frac{3}{2}$
 $= \frac{3}{2}R - \frac{1}{2}F - \frac{3}{2}$

AD $R = 1 + \frac{(n+F)}{3}$ muss in No ligger.

Co mogliths Kombinationen:

 $A_2 N \mid F \mid R \mid Pr \mid A_3 = \frac{\sqrt{3}}{2} \mid \frac{1}{2} \mid \frac{\sqrt{3}}{2} \mid \frac{$

4.2 X, Y, Z, W mach. Even mit W~ Bin (5, =), X~ Geo (=) Y~Bin (20,3), 2~G=(2) Nach Verlesung: X1, ..., Xn unabh Dann: @ fr(X1),..., fr (X1) unaloh. Elx1. ...
